Safe and reliable transports

With TourMonitor, the future of operational tour monitoring is already beginning today: automatic alarm configuration, ETA calculations as well as automated data forwarding and reports make day-to-day business easier.

Alarm configuration

Alarms, especially geofence and temperature alarms, are not always the same – in fact, they are almost always dependent on the particular transport. The tour-based alarm configuration ensures that the correct alarms are automatically configured for the transport. This means that all deviations are actively reported and you do not have to check whether everything is working.

ETA calculation

All tours and orders in cargofleet 3 have a calculated time of arrival at destination (ETA), meaning that impending delays can be proactively notified to the customer. This data can then in turn be the basis for additional orders and tours. This guarantees optimised and effective scheduling and increases customer satisfaction.

Data forwarding

Do you know the customer's need to forward vehicle or load data for a transport to his customer or one of his service providers? You do not want to release all data in general and trust that only the relevant data will be used. Then tour-based data forwarding is just the thing for you – here, only the necessary data for the tour in question is forwarded. A tracking page can be activated for brief, manual viewing by the end customer.

Reports

Reports can be produced automatically based on tours, and also transmitted automatically. No matter whether it is tour-related reports (for example consumption reports) or temperature records. Selected report data can also be forwarded to shippers or other partners.

AUTOMATED

TRANSPARENT

ON TIME

Transparency across the entire transport process

for your dispatchers, drivers, customers and service providers.

idem telematics – connecting all road transport: As Europe's leading telematics partner, idem telematics supports forwarding agents, shippers and fleet operators in continuously improving their core business by means of data, thereby increasing their profitability, customer satisfaction and competitiveness.

Europe's market-leading, all-in-one cargofleet telematics platform for trucks, trailers, freight and logistics consolidates and summarises the data sets of vehicles, drivers and freight. idem telematics provides a complete system for increasing the transparency and profitability of the entire logistics process. The benefits: unique customer proximity and flexibility for individual telematics requirements based on 25 years of telematics, transport and logistics expertise. idem telematics is a subsidiary of the BPW Group and employs around 75 staff at its locations in Munich and Ulm.
